

I am concerned regarding the effect Broadband Over Powerline will have on radio reception at my home. I am an amateur radio operator and the idea of radio frequency interference on the amateur bands from BPL is a troubling one, particularly given the high probability of it occurring, and amount of bandwidth affected. Furthermore, there are quite a few other services that would likely be affected as well, particularly shortwave broadcast stations. I don't believe this is a good idea and will have a massive negative impact on HF operations in general. Should it cause the interference predicted, there would most likely be a great deal of folks complaining even more than now, and no doubt the FCC will be the first government agency with a camera and microphone pointed their way. Let's stick with cable, or DSL...
